Active attacks in the United States, 2000–2025

Fact sheet from the Active Attack Data, ALERRT Center, Texas State University

Every active attack identified in the United States from 2000 through 2025: the events identified by the FBI plus those identified by ALERRT for the same period (634 attacks). The list is rolling; as attacks happen or are found, the numbers adjust. Each box and table compares 2025 with 2024 and with the average year from 2020 to 2024.

Reading these numbers

Columns. The 2000–2025 column covers every attack in the data, with its share of the total (firearm types are a share of firearm attacks). The 2024 and 2025 columns are counts, and *vs. 2024* is the change from the year before. Single years hold few attacks, so a change of a few events is within normal year-to-year variation; the five-year average gives the longer view.

Definitions. *One weapon* includes vehicle attacks and attacks with a firearm of unknown type. Race counts every attacker (unknown included), so its rows total the number of attackers, not attacks. *Shot by civilian* includes off-duty officers and security guards. *Fled the scene* includes a small number of attackers who fled after police arrived. Victim counts follow ALERRT's definitions, which are stricter than the FBI's. Year-by-year figures always come from the current version of the data, so attacks identified later are counted in the year they happened.
